

The **4" WISY Multi-function Overflow Device** is connected to the overflow pipe within the storage container or cistern. The multi-functional overflow device is made of impact-resistant ABS plastic that eliminates drain odors in the tank, provides vermin and backflow protection, and skims surface debris. Device comes with support strut, clamp, and fits 4" overflow piping.

Below are the dimensions and the specifications for the WISY Overflow Device:

(Dimensions in parentheses are millimeters)

PART NUMBER: US1002

8" OVERFLOW DEVICE

The 8" Overflow Device can be connected directly to a standard overflow pipe in the rainwater storage tank. The water inlet of the overflow device should be placed at the height of maximum storage in the rainwater storage tank. The overflow device is designed to siphon debris as the tank overflows which is a critical step in maintaining a healthy rainwater harvesting tank.

The trap in the overflow device will be filled with water at all times. The trap holds 13 US Gallons of water. To support this weight a 2" piece of PVC pipe is provided and fits over the nipple on the trap of the overflow device. The support should be cut to proper length once the overflow device is installed.

A Stainless Steel Chain is provided to further support the overflow device. Hardware is provided to connect the each end of the chain to the overflow device while the other end should be secured to the top or wall of the storage tank.

- Overflow should be placed inside the water storage tank
- Prevents drain odors and prevents vermin from entering the tank
- Removes floating particulate from the surface of stored water
